Work Experience

Proposify / Product Designer

2025 - 2026, HALIFAX

I led design on the proposal editor and the Pricing Catalog, used by **5,000+ sales teams**. V3 of the editor was thin enough that customers tried it and went back to V2. I ran a standing Thursday session with its heaviest users and, with the PM and tech lead, phased in what they kept asking for: a block system, reusable content, and a pricing table you could actually quote from. Preparing a quote went from **45 minutes to 15**, and user engagement was **2.4x higher**.

Because V2 and V3 ran side by side, much of my work went to reconciling them. I consolidated about 40 inconsistent components into a single library, which **cut handoff time to engineering in half**.

On CPQ, our real competitor was Excel. Reps didn't trust the prices in Proposify, so they built quotes in spreadsheets and pasted them in. After interviews with four mid-market accounts, we cut a full CPQ brief down to a Pricing Catalog, and I turned what customers told us into four principles the team used for every trade-off. Task completion went from **50% to 87.5%**, and proposals came together about **25% faster**.

Ownly / Product Designer

2023 - 2025, CALGARY

Ownly is sold to home builders but used by their buyers, so most screens served two audiences: builders on one side, **4,000+ homebuyers** on the other. As the only product designer, I spent two years on three products that let people configure, verify and reserve a new home online, **24/7**, without a sales centre. I cut the configurator from **12 steps to 4**. Moving verification to after the reservation took its drop-off from **75% to 45%**. All three shipped with builders including Shane Homes and Calbridge Homes.

CostCertified / UX → Product Designer

2022 - 2023, CALGARY

CostCertified had no design system, only hundreds of one-off patterns. I built the first one, and two product teams adopted it. I ran heuristic evaluations on the core flows and fed the priority issues into the next two releases. Before each release, I reviewed specs and component builds with engineering.

Evans Hunt / UX Designer

2021 - 2022, CALGARY

I started here as an intern and moved up to junior, then UX designer, inside eight months. It's where I learned how UX works in an agency, on client projects for Alterra and the Government of Alberta.

Profile

I make complicated software feel obvious to the people using it. I've spent five years doing that in B2B: CPQ and pricing, a proposal editor, construction estimating, and buying a new home online. I start with structure, not screens. In complex tools the hard part is deciding what each thing is and how it connects to everything else, and the screens follow from that.

Skills

Design systems: Component libraries • Multi-version alignment • System maps • Documentation • Storybook

Research: User interviews • Surveys • Usability testing • Heuristic evaluation • Information architecture • User flows

Prototyping: Figma • Wireframes • Interactive prototypes • CSS • AI-assisted prototyping with Claude Code

Working with teams: Scoping with PM and engineering • Handoff • Spec review • Design QA • Agile • Jira

Education

Mount Royal University / UX Design Certificate

2020 - 2021, CALGARY

A year of research methods, information architecture, interaction design and usability testing.
